Piragua Venture Sport

Producto nº

457

This sport kayak is suitable for small adults and children up to a weight of about 110 lbs. The rocker at the aft end has been straightened to aid in straight line paddling so necessary on a small boat made for cruising. The bow is slightly more vertical either the 16' -6" or the 17 footer to be more in scale with its size. The boat has a perky feel with a springier sheer line, compact length and the upright bow. The boat will give an apparent stability equally as good because of the lower centre of gravity of smaller paddlers. With the lowest speed resistance of all the kayaks, it will be a pleasure to paddle in calm bays or open lakes.

(14') (BM)

Length 14', Beam 22", Weight 35#

Listones de Cedro Rojo

Kit incompleto

Recomended to:

-Small lakes flatwater day trips

-Coastal larger lakes, day trips

-Coastal larger lakes, touring

Pirogua West River

Producto nº

517

The design brief was for a shorter boat with large paddler and payload capacity, but with speed. The eight-panel hull offers excellent efficiency, stability, and a fine turn speed, while maximizing space in the cockpit and storage compartments. The West Rivers track as if on rails and are suitable for rough conditions or strong winds. The fiberglass on the inside and outside of the hull and on the deck ensures strength.

Both sizes share the same basic hull shape.

Kits include: Plans, instructions, pre-cut parts, hatches and bulkheads, full deck rigging, Keepers™ adjustable footbraces, epoxy kit, fiberglass for hull (inside and out) and deck, tractor seat, and backband.

West River 162 Kit

Kit completo

Includes Hatches and Bulkheads

Length: 16'2", Beam:23-1/2", Weight:37 lbs.

The West River 162 is lower, with a flatter aft deck, for lighter paddlers or those who don't need to carry a hundred pounds of gear.

Ref.: 84 - 517 - 2036

PVP 1 024,44 €

West River 164 Kit

Kit completo

Note: One Plan For Both Versions-- Includes Hatches and Bulkheads!

Length: 16'4", Beam:24-1/2", Weight:38lbs.

The West River 164 is deeper to accommodate heavier or taller paddlers or to fit more camping gear: paddlers with up to size 14 shoes will have no problem fitting in the 164. It's a good choice for the paddler of substance who doesn't want to be forced into the 18-foot range for a kayak that fits and performs.

Piragua Caspian Sea

Producto nº

458

This is targeted at novice paddlers who want excellent tracking and control, but do not want to invest in the complication and expense of a rudder. Slightly hard bilge has high initial stability yet is extremely docile in lumpy conditions. Departing from the trend towards boats that are steered with heel, the Caspian is helm neutral when heeled beyond 10 degrees. This means that paddlers will not be surprised by unanticipated turns when their balance wavers.

The prismatic coefficient is moderate for efficiency at low speeds. Much shorter than most sea kayaks intended for thising, it derives its efficiency from low wetted surface

(15'3") (GV)
Caspian Sea Dimensions
Overall Length 15'4.5"
Waterline Length 14'9"
Max. Beam 24"
Displacement 160-240 lbs.

Piragua Georgian Bay

Producto nº

459

Sea kayak classic!

The perfect sea kayak for paddlers who want a boat for fishing, photography or nature observations and is also great for the novice. The hull is a shallow-arch design with ample volume carried toward the ends to produce a kayak with high initial stability. The hull

flares above the waterline to provide good secondary stability. The rocker incorporated into this design, along with its shorter length, make it an easy turni sea kayak. It is a kayak that everyone can feel comfortable in and enjoy, from novice to expert paddler. It is 23" at the waterline. This shallow arch hull produces high initial stability and a maneuverable kayak. This is a great sea kayak for close quarters such as salt marshes and river paddling. A design well suited to fishing and nature observation. The comfortable stability and easy handling of this kayak make a boat novice can love and yet has the open water tracking and handling characteristics the seasoned paddler will respect.

It has a low sheer line to shed wind. The vertical edge of the stern produces a long waterline/ faster hull and easily accommodates a rudder. Yet this kayak tracks so well you may not want one. Access to storage is through hard-shell hatches which are water tight. The cockpit coaming is large for comfortable sitting. Knees can be raised from the seated position.

Piragua North Sea

Producto nº

463

A true expedition kayak

It is designed for ontrollability without having to resort to a rudder, and for a cru speed of fthis knots for the average paddler. The designed displacement of 325 pounds assures adequate storage space for gear. The longer a boat gets, the more sluggish it handles, so 'deadwood' has been cut back at both the bow and the stern. It handles rather nicely even in lumpy seas.

The size of this boat makes it less desirable for day paddling, and it is too much c handful for smaller paddlers. But, if you take long trips or pack heavily, this is a g boat.

Recommended paddler weight: 160-290

Piragua Resolute

Producto nº

460

This stable load carrier is excellent for the novice kayaker. It will inspire confidence and lead to continued enjoyment of the sport. Like the 14 footer, the rocker has been reduced aft to aid in tracking ability. The beam is ample at 25. 4" and the cockpit has been widened to match.

The hull is a very shallow vee, the flattest of the hulls shown here - to permit the width for stability and yet maintain a moderate displacement. Developed in response to requests from heavier and wider paddlers who wanted a shorter boat. Maximum beam of 25. 4 compared with the 17 footer at 23. 5 is more stable and has good load capacity. Average load 260 lbs. , but it can handle up to 340 without a problem.

Piragua North Star

Producto nº

465

Exceptional secondary stability

The split or bifurcated bow. The lower half is a cutwater, parting the waves for a smooth flow of water over the hull. This lower vertical edge also improves tracking; it slices into waves keeping the bow from being deflected by winds. The upper half the bow flares outward. Waves hitting this surface create lift and coupled with the great volume of the forward hull, lift the kayak over waves. The bow makes a smooth transition into a highly rocker keel accounting for 1/3 of the fore hull. This rocker coupled with the design of the bow make the baidarka style an incredibly great kayak for surfing waves. The volume of the stern is carried backward and is truncated, then sweeps into a fixed rudder.

The rudder makes tracking excellent. The swept sides of the rudder create a surface that is an asset in surfing. One of the hardest parts of surfing is catching the wave. The surfaces of the rudder get a push from braking waves to help you catch the wave. As a kayaker paddles faster hulls with a fine or pointed stern will squat in the depression created by the stern waves. The high volume of the baidarka style stern keeps it high in the water increasing speed. Also this truncated stern sends hull waves farther back as speed increases, forcing the waves to act as they would on a boat with a longer water line, increasing speed.

It is 20" at its widest point at the waterline. This long, narrow, rounded hull is very fast. Volume is carried far forward and aft on this design. The bifurcated bow, along with this volume make this kayak ideally suited to big waters. It rides over waves, rather than punching through them, for a drier ride. It also surfs waves incredibly well. The fixed rudder makes tracking very good, even in strong cross winds. This design has the most volume of any solo sea kayak available, making it the outstanding expedition kayak. And yet, it's a joy to paddle on a small pond.

The baidarka hull is "fish form" (the widest part of the hull is forward of center) so as to be the most efficient design for speed. North Star has moderate primary stability. The high volume of the hull produces incredibly high secondary stability. The features of the bow and stern combine with the shape of the hull, to produce very fast (easy paddle) kayak, designed to handle rough seas with ease.

Piragua Panache

Producto nº

467

This kayak is a fast, long, narrow and responsive sea kayak. The shallow-arch hull becomes a deep V at the bow and stern to cut smoothly through waves and to track effortlessly in winds. The bow is designed with added volume to rise over waves. The narrow rounded hull reduces wetted surface for a fast kayak hull. The deep vee sections fore and aft, along with the deep foot of the stems make this sea kayak track extremely well in strong winds. The light weight of this kayak makes it a joy to paddle and maneuver. The shallow-arch hull design and narrow beam make it a very responsive kayak with moderate initial stability; because of the hull's generous flare above the waterline, it has high secondary stability. The cockpit opening is large for easy entry and exit, allowing knees to be raised from the seated position. In warm weather and calmer waters, with the spray skirt off, the large cockpit is cool and comfortable. Generous bulkheaded watertight compartments, fore and aft, are accessed by large, double gasketed, hard-shell hatch covers.

Piragua Reliance Tandem

Producto nº

468

This boat has a comfortable feel to it. The length gives an incredibly calm, unhurried impression even when the boat is travelling at top speed. The beam of 28.75" provides room for cargo and gives a stability that makes kayaking in any weather comfortable.

Moderate flare above the waterline will increase the stability as the boat heels. Two water tight compartments with access only by deck hatches provide enough flotation to keep the boat afloat in the event of a capsize.
